Annex 2: Gazelle pre-Projectathon Tests Manual

Pre-requisites

Registration has been completed and SUTs have been accepted.

Overview

What you need to do during Pre-projectathon phase:

1. Share your SUT network in Gazelle
 - a) Declare your SUT hostname and IP address
 - b) Validate and approve SUT Network Interface list generated by Gazelle
2. Upload and share your public AS4 certificate and C3 and C4 identifiers in Gazelle
3. Perform preparatory tests
4. Perform connectivity tests

1 Share your network in Gazelle

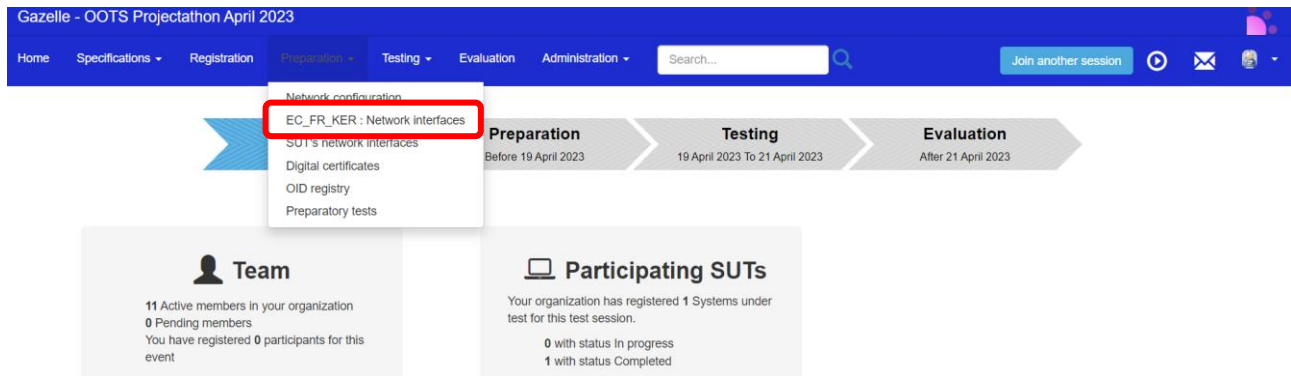

During the Projectathon, you will be asked to test against other systems under test. It implies knowing the endpoints where to send data. Thus, Gazelle offers a feature to share the connectivity details (IP address, port, URL) of the webservices your system exposes.

The technical team has generated default configurations for your endpoints based on your systems' registration. Your task is to update those default entries so they reflect the actual configuration of your system under test.

By default, one host is generated for each system you have registered. You have the ability to change which host is used for each single entry in the list of configuration. It means that you can have several systems using the same host. You can also create additional hosts if needed.

1.1 Declare your hosts

1. Go to the Menu “Preparation > Your Org: Network Interface”

2. In the dropdown, choose a SUT

3. In the “Network configuration for *Your org*” section, you will need to declare all the hosts your systems are using. This information is needed for other participants to configure their firewall and accept incoming requests.

- If your SUT acts as a server, Gazelle automatically generates a default host entry for your SUT. You can modify the default values by clicking on the Edit button.
- If your SUT acts as a client and there is no default host being generated by Gazelle, you should add the host by clicking on the “Add a network config.” Button.

Configurations

4. Fill up at least:

- a. the “host name” with the FQDN of your system
- b. the “IP Address” fields with the public IP address of your system

5. and save.

Configuration edition

EC_FR_KER

Network configurations for EC_FR_KER - Kereval

Add a network config.

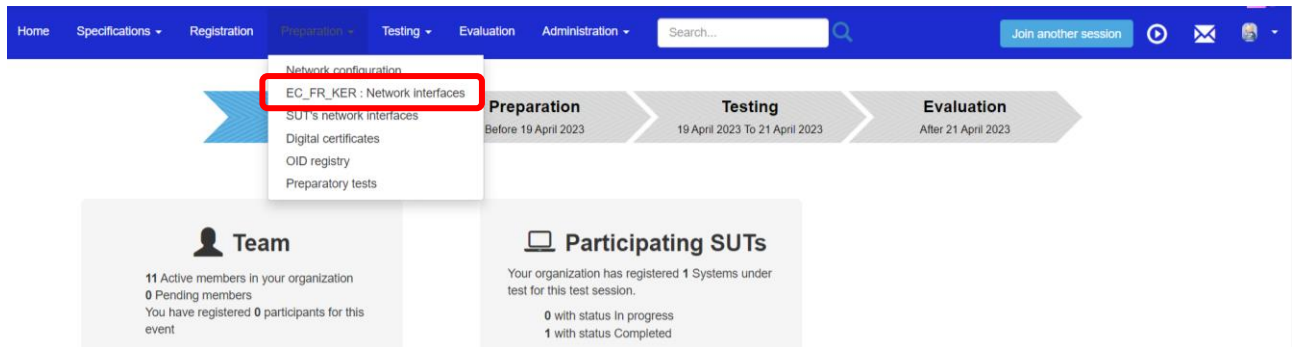

Host name	Alias	IP	Comment	Action
ec-fr-ker0	Not used by any system			<div> <div></div> <div></div> </div>

Results per page :

20

1.2 Validate and approve your systems network configuration

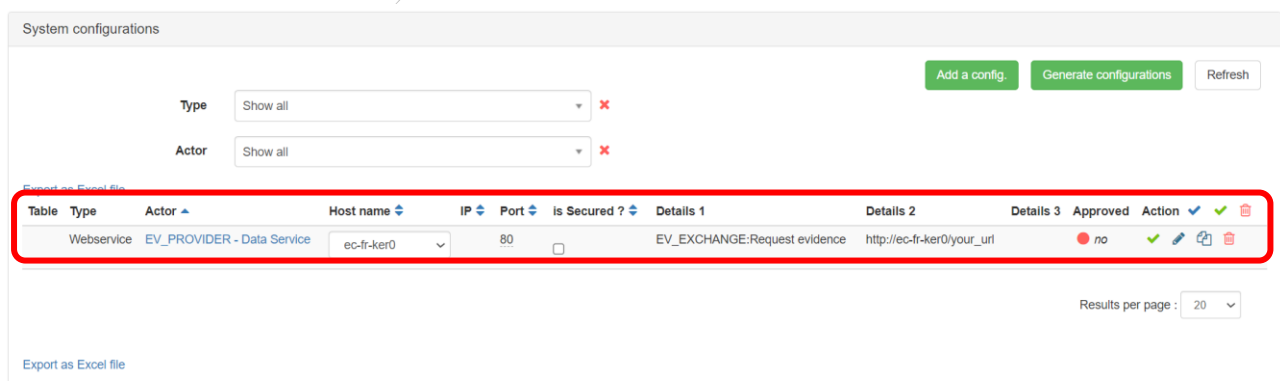

1. Go to the Menu “Preparation > Your Org: Network Interface”

2. In the dropdown, select one SUT

3. In the “System configuration” section, if your system provides services, you will see that Gazelle has generated default configurations for your system. In the following steps, you will edit and approve these configurations. If your system only acts as a client, Gazelle has not generated any configuration for your SUT, you can skip this section for this SUT.

4. Click on the “edit” icon to edit the values:
 - a. Select the right host
 - b. Edit the port used

- c. Indicate if the communication is secured or not secured.
- d. For web services, edit the URL

System configurations

Add a config. Generate configurations Refresh

Results per page : 20

Export as Excel file

7. Your test partners will use this information to perform the connectivity test and peer-to-peer tests with your SUT during the event.
8. Repeat the steps for all your SUTs

2 Share your certificates

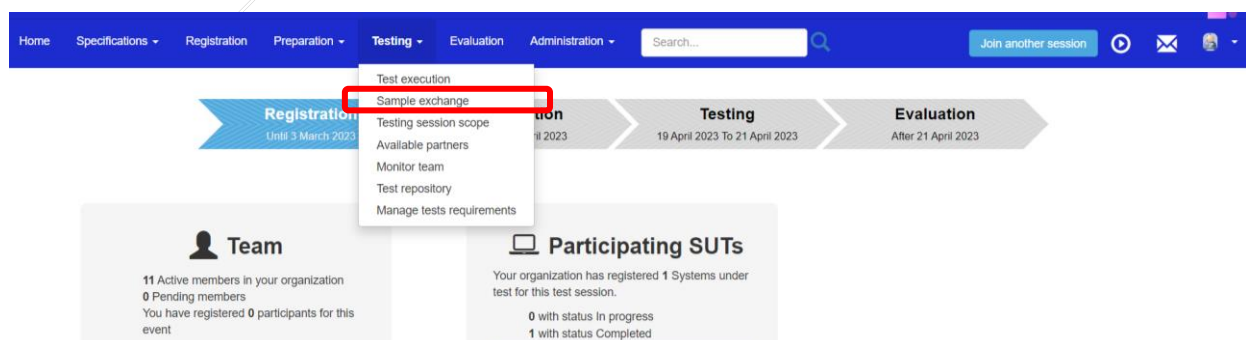

2.1 Share your AS4 public certificate and C3, C4 identifiers

- Before exchanging AS4 messages with your test partners, you need to exchange with your test partners:
 - a) The AS4 public certificates
 - b) The C3 and C4 identifiers

To facilitate the exchange of the certificates and identifiers between the participants, all the participants are required to upload/share their SUTs AS4 public certificates and identifiers in Gazelle. Then the participants can download the AS4 public certificates and identifiers of their test partners from Gazelle and configure their SUTs accordingly before exchanging AS4 messages with their test partners during the event.

2.1.1 Upload your AS4 public certificate and share your C3, C4 identifiers

1. Compress your AS4 public certificate in zip format.
2. Go to the menu “Testing” > “Sample exchange”

3. In the dropdown list, select your System Keyword.

List of samples

Sample sharing at the system level

This page is of interest for the systems that can share or render 'samples'. This is usually the cases for the actors Report Creator/Reader, Evidence Document Creator, Document Sources, Document Consumer, Display, Source.... This page makes it possible for you to see what are the samples available and the one you might shared.

Organization : EC_FR_KER - Kereval

systems : SYSTEM_FR_KER_2

Samples to share Samples available for rendering

You have to create the following type of samples for your peers to render. Note that you may share more than sample one per type of sample.

AS4 Public Certificate +

4. In the tab “Samples to share”, you can click on the “+” sign to add your certificate.

List of samples

8. Once the file is downloaded successfully. Unzip the file and configure your SUT with your test partner's AS4 public certificate.

2.4 Download your test partner's CA certificate

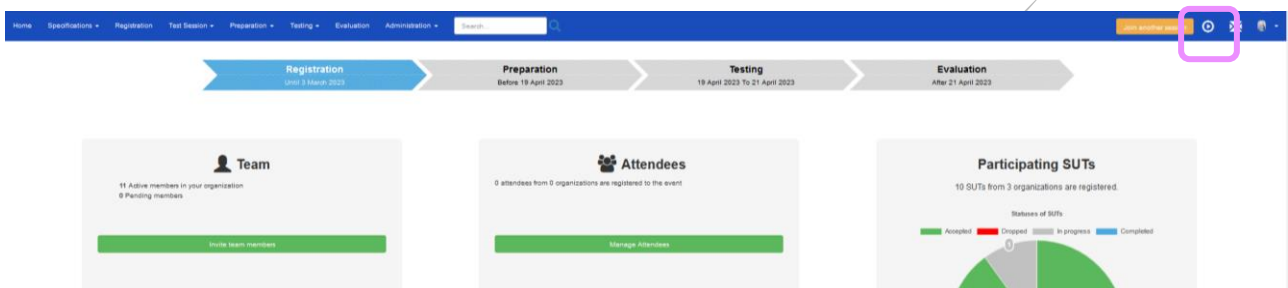

Follow the steps in [2.0.3 Download your test partner's AS4 public certificate and C3 and C4 identifiers](#) (skip step 6), select **CA certificate** in the "Sample to share" tab.

3 Execute preparatory tests in Gazelle

The preparatory tests are no-peer tests to help you validate and prepare your SUTs before the event. Gazelle generates list of test cases that need to be executed based on the registered profile/actor/option combinations.

3.1 Access test cases

1. To access to the test execution page, click on the  icon on the top right menu, or select “Test execution” in the “Testing” menu.

2. The Test Execution page lists all the tests that the system should cover. The test cases are grouped by the SUT and Profile/Actor/Option.

Test instruction, description and evaluation

Test Description

Special Instructions
 This test is executed according to the Testing Component 1: OOTS validator 2022_Q4, available via https://ec.europa.eu/digital-building-blocks/wikis/display/SDGOO/1+Testing+Component+1%3A+OOTS+validator+2022_Q4
 No access to the Testing Services Test Platform is needed as the validator can be executed in standalone mode
 The validator implements and validates the data model as defined in https://code.europa.eu/oots/ddd/ddd_chapters/-/tree/master/OOTS-EDM/

Description
 In this test case, the Evidence Requester will validate the Evidence Request message it normally submits as payload to an eDelivery AS4 message, but now against a standalone validator, without involving the AS4 messaging part
 Use your browser to navigate to https://oots-testing-pr-ag.westeurope.cloudapp.azure.com/ootsvalidator/request_response/upload
 Select the 'OOTS Evidence Request' validation type
 Validate your Evidence Request message

Evaluation
 TEST STEP 10: Upon successful validation message against the validator, provide screenshot (including test case date/time) of the successful test case.

5. Carefully read the test description section.

Follow the test steps, validate the test result with validator and upload the proof of test such as log, print screen, messages...

- A test step always includes the following information:
 - Test steps number.
 - Type of message sent/validated in the step (can be null)
 - Actors involved in the test steps
 - Description of the test step: to be read and respected
 -  button: Add comment or message regarding the test step.
 -  button: Add the permanent link (URL) from the validator, EVS Client tool.
 - An "Upload File" button: to provide proof of testing such as log, print screen and messages.

Please upload a print screen and / or a log file of your test here.

Step	Trans.	Trans. - Message Type	Opt.	Sending Actor	Receiving Actor	Status	Validation Status
10	- Instructions	R	SYSTEM_TEST_ORG3_EV-REQUESTER - EV_REQUESTER	SYSTEM_TEST_ORG3_EV-REQUESTER - EV_REQUESTER		✓	
<p>Desc: Use your browser to navigate to https://oots-testing-pr-ag.westeurope.cloudapp.azure.com/ootsvalidator/request_response/upload Select the 'OOTs Evidence Request' validation type Validate your Evidence Request message [Proof of test] screenshot (including test case date/time) of the successful test case.</p> <p>Logs: No comment, file or URL</p> <p>   Upload a file (click or drop)</p>						  	
<p>Test current status : Running</p>							

6. After completed each test step, update the test step status by pressing the , or button:

- *Failed*  : the test has failed on this step (e.g. validation result KO).
- *Completed*  : the test step has been completed.
- *Skipped*  : the step does not require any action from the user.

7. Once all the test steps are completed, update the test instance status to:

- To be verified (success)
- Aborted (Failed)

4 Connectivity tests

4.1 Configure your firewall

1. Go to the Menu “Preparation > Network configuration”

1. Download the host white-list by clicking on the “Download hosts file” button.

IPs configuration

Hosts configuration

Network configuration information

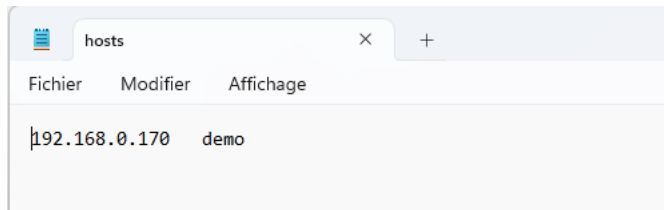

:

2. The hosts file contains all the nodes that are part of the « online-test-network » for the event.

It can be used as:

- data source to configure your firewall
- hosts file in case of DNS delay or issue

Example hosts list:

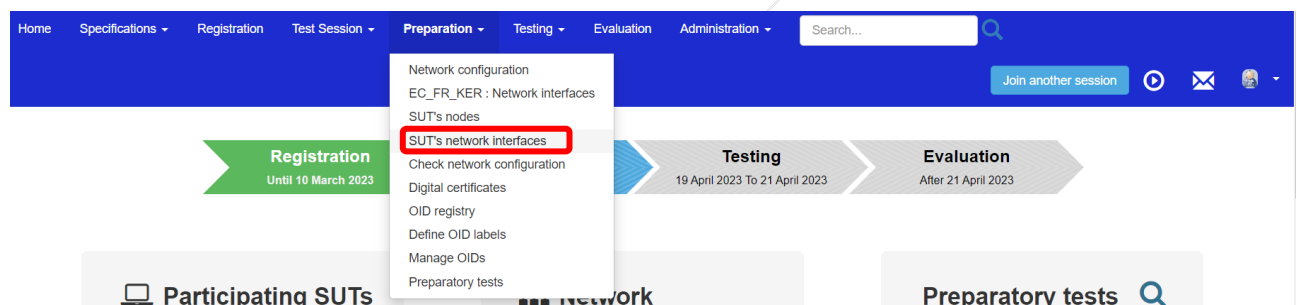

Fichier	Modifier	Affichage
192.168.0.170 demo		

3. You can use this file to update or verify your Firewall configuration.

4.2 Export the System Interfaces Network list

1. Go to the Menu “Preparation > SUT’s network interfaces”

2. Set the filter to all organizations and approved network configuration by :

- Remove the filter on the Organization keyword by clicking on the ✖ icon.
- Set Approved to “Yes”

Configurations

Search Criteria

Organization Keyword Show all

Actor Show all

Type Show all

is Secured ? Show all

System Show all

WS Transaction Usage Show all

Approved (2) Yes

URL for downloading configurations as CSV

Export as Excel file

Sys	Table	Type	Actor	Host name	IP	Port	is Secured ?	Details 1	Details 2	Details 3	Approved	Action
SYSTEM_FR_KER_DS_DEMO / EC_FR_KER	WebService	EV_PROVIDER - Data Service	ec-fr-ker0		1024		true	EV_EXCHANGE:Request evidence	https://ec-fr-ker0:1024/your_url		yes	
SYSTEM_TEST_ORG3_DEMO2 / TEST_ORG3	WebService	EV_PROVIDER - Data Service			80			EV_EXCHANGE:Request evidence	http://your_url		yes	<input type="button" value="✓"/> <input type="button" value="✗"/> <input type="button" value="📄"/> <input type="button" value="🗑️"/>

- The approved systems Interfaces are listed, click on the “URL for downloading configurations as CSV” link to download the file.

URL for downloading configurations as CSV

Click here to see configurations type depending actors

Export as Excel file

Sys	Table	Type	Actor	Host name	IP	Port	is Secured ?	Details 1	Details 2
SYSTEM_EC_DIGIT / EC_DIGIT	WebService	DATA_SERVICE_DIR - Data Service Directory	ec-dlg		80			LOOKUP_EV_PROVIDER:Evidence Provider Lookup	http://ec-digit0/your_url
SYSTEM_EC_DIGIT / EC_DIGIT	WebService	EV_BROKER - Evidence Broker	ec-dlg		80			LOOKUP_EV_TYPE:Look up Evidence Type	http://ec-digit0/your_url

- You are redirected to the page to choose the configuration type, click on “WebServiceConfiguration”.

In addition to the parameter testingSessionId, you have to provide a system keyword (systemKeyword) and/or a configuration type (configurationType) parameter
To get oid add oid=true in addition to the parameter testingSessionId and/or a system keyword (systemKeyword)
You can ask for the following configuration type :

[SyslogConfiguration](#)
[DicomSCUConfiguration](#)
[RawConfiguration](#)
[HL7V3ResponderConfiguration](#)
[DicomSCPConfiguration](#)
[HL7V3InitiatorConfiguration](#)
[WebServiceConfiguration](#)
[HL7V2InitiatorConfiguration](#)
[HL7V2ResponderConfiguration](#)
[List OID](#)

- A file called WebServiceConfiguration.csv is downloaded.

Example WebServiceConfiguration.csv:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Configuration	Type,Company,System,Host,Actor, is secured, is approved,comment,url,assigningAuthority,ws-type,port,port proxy,port secured,port proxy secured

4.3 Execute the Connectivity Test script

- Go to <https://gitlab.inria.fr/gazelle/specific-tools/connectivity-test-scripts>
 - The script works on Windows and Unix
 - Read instructions in the README.md
- Execute the script as below with the downloaded SUT network interfaces list (WebServiceConfiguration.csv) and save the test result into a file.

```
$ ./connect-test.[sh|ps1] -csv WebServiceConfiguration.csv > connectivity-results.csv
```

- Report your connectivity results to the technical management team (EC-OOTS-SUPPORT@ec.europa.eu)
